The screenshot shows the 'System File Check (Optional)' step of the 'Tweakimg.com - Windows Repair v3.8.3 (Free Version)' application. The interface includes a progress bar at the top with steps: Step 1: Important, Step 2: Optional, Step 3: Optional, Step 4: Optional (selected), Step 5: Backup, Repairs, Pro Features, and Settings. The main content area contains the following text:

System File Check (Optional)

Before working with files on the system it is a very good idea to have windows check the file system files for corruptions or mismatched versions. Having the system files checked by the System File Checker can even repair some known problems. Problems that are caused by wrong versions of the system files.

System File Check

System File Checker will scan your system for corrupt or wrong Windows system files. This is a good idea to do to make sure proper files are intact before starting the repairs. For Windows XP & 2003 you will need your Windows CD. Vista or newer do not require the Windows CD. Please restart Windows after.

Do It

The System File Checker is a tool built into Windows and not a part of this program. If you have trouble with the SFC you may need to skip it.
